# 1 Introduction

Beamer is an awesome way to make presentations with LaTeX, but its theme selection is surprisingly sparse. The stock themes share an aesthetic that can be a little cluttered, while the few distinctive custom themes available are often specialized for a particular corporate or institutional brand.

The goal of **ru** is to provide a simple, modern Beamer theme suitable for anyone to use. It tries to minimize noise and maximize space for content; the only visual flourish it offers is an (optional) progress bar added to each slide or to the section slides.

By default, **ru** uses **Fira Sans**, a gorgeous typeface commissioned by Mozilla and designed by **Carrois**. For best results, you will need the Fira typeface installed and use  $\text{Xe}\text{L}\text{A}\text{T}\text{E}\text{X}$  to typeset your slides. However, **ru** can also be used with other typefaces and  $\text{L}\text{A}\text{T}\text{E}\text{X}$  build systems.

**ru**'s codebase is maintained on **Gitlab**. If you have issues, find mistakes in the manual or want to help make the theme even better, please get in touch there.

## 2 Getting Started

### 2.1 Installing from Git

If you want to use the cutting-edge development version of **ru**, you can install it manually. Like any  $\text{\LaTeX}$  package, this involves four easy steps:

**Download the source** with a `git clone` of the [ru repository](#) or as a [zip archive](#) of the latest development version.

**Compile the style files** by running `make sty` inside the downloaded directory. (Or run  $\text{\LaTeX}$  directly on `source/rutheme.ins`.)

**Move the resulting `*.sty` files** to the folder containing your presentation. To use **ru** with many presentations, run `make install` or move the `*.sty` files to a folder in your  $\text{\TeX}$  path instead.

**Use the theme for your presentation** by declaring `\usetheme{ru}` in the preamble of your Beamer document.

**ru** uses the Make build system to offer the following installation options for advanced users:

`make sty` builds the theme style files.

`make doc` builds this documentation manual.

`make demo` builds a demo presentation to test the features of **ru**.

`make all` builds the theme and manual.

`make clean` removes the files generated by `make all`.

`make install` installs the theme into your local texmf folder.

`make uninstall` removes the theme from your local texmf folder.

### 2.2 A Minimal Example

The following code shows a minimal example of a Beamer presentation using **ru**.

```
\documentclass{beamer}
\usetheme{ru}           % Use ru theme
\title{A minimal example}
```

```

\date{\today}
\author{Benoit Viguier}
\institute{Radboud University}
\begin{document}
  \maketitle
  \section{First Section}
  \begin{frame}{First Frame}
    Hello, world!
  \end{frame}
\end{document}

```

## 2.3 Dependencies

**ru** depends on the **beamer** class and the following standard packages:

- **tikz**
- **etoolbox**
- **ifxetex**
- **pgfplots**
- **calc**
- **ifluatex**

For best results, we recommend installing the fonts **Fira Sans** and **Fira Mono** and compiling with **ru** using Xe<sub>La</sub>TeX or Lua<sub>TeX</sub>. These are optional dependencies; **ru** is compatible with (e.g.) pdf<sub>La</sub>TeX and will fall back to standard fonts if **Fira Sans** or **Fira Mono** is not installed.

The packaged name of **Fira Sans** is **Fira Sans OT** in some Linux distributions; this case is automatically handled by **ru**.

## 2.4 Pandoc

To use this theme with **Pandoc**-based presentations, you can run the following command

```

$ pandoc -t beamer --latex-engine=xelatex -V theme:ru -o
  output.pdf input.md

```

## 3 Customization

### 3.1 Package options

The theme provides a number of options, which can be set using a key=value interface. The primary way to set options is to provide a comma-separated list of option-value pairs when loading **ru** in the preamble:

```
\usetheme[option1=value1, option2=value2, ...]{ru}
```

Options can be changed at any time — even mid-presentation! — with the `\metroset` macro.

```
\ruset{option1=newvalue1, option2=newvalue2, ...}
```

The list of options is structured as shown in the following example.

option key	<i>list of possible values</i> .....	default
------------	--------------------------------------	---------

A short description of the option.

#### 3.1.1 Main theme

titleformat	<i>regular, smallcaps, allsmallcaps, allcaps</i> .....	regular
-------------	--	---------

Changes the format of titles, subtitles, section titles, frame titles, and the text on “standout” frames. The available options produce Regular, SMALLCAPS, ALLSMALLCAPS, or ALLCAPS titles. Please refer to Section 6.1 for known issues with these options.

titleformat plain	<i>regular, smallcaps, allsmallcaps, allcaps</i> .....	regular
-------------------	--	---------

Changes the format of “standout” frames (see `titleformat`, above).

### 3.1.2 Inner theme

<code>sectionpage</code>	<i>none, simple, progressbar</i> . . . . .	<code>progressbar</code>
	Adds a slide at the start of each section ( <code>simple</code> ) with an optional thin progress bar below the section title ( <code>progressbar</code> ). The <code>none</code> option disables the section page.	
<code>subsectionpage</code>	<i>none, simple, progressbar</i> . . . . .	<code>none</code>
	Optionally adds a slide at the start of each subsection. If enabled with the <code>simple</code> or <code>progressbar</code> options, the style of the <code>section page</code> will be updated to match the style of the <code>subsection page</code> . Note that section slides and subsection slides can appear consecutively if both are enabled; you may want to use this option together with <code>sectionpage=none</code> depending on the section structure of your presentation.	

### 3.1.3 Outer theme

<code>numbering</code>	<i>none, counter, fraction</i> . . . . .	<code>counter</code>
	Controls whether the frame number at the bottom right of each slide is omitted ( <code>none</code> ), shown ( <code>counter</code> ) or displayed as a fraction of the total number of frames ( <code>fraction</code> ).	
<code>progressbar</code>	<i>none, head, frametitle, foot</i> . . . . .	<code>frametitle</code>
	Optionally adds a progress bar to the top of each frame ( <code>head</code> ), the bottom of each frame ( <code>foot</code> ), or directly below each frame title ( <code>frametitle</code> ).	

### 3.1.4 Color theme

<code>block</code>	<i>transparent, fill</i> . . . . .	<code>transparent</code>
	Optionally adds a light grey background to block environments like <code>theorem</code> and <code>example</code> .	
<code>background</code>	<i>dark, light</i> . . . . .	<code>light</code>
	Provides the option to have a dark background and light foreground instead of the reverse.	

### 3.1.5 Font theme

```
titleformat title regular, smallcaps, allsmallcaps, allcaps ..... regular
titleformat subtitle
titleformat section
titleformat frame
```

Individually controls the format of titles, subtitles, section titles, and frame titles (see `titleformat`, above).

## 3.2 Color Customization

The included **ru** color theme is used by default, but its colors can be easily changed to suit your tastes. All of the theme's styles are defined in terms of three beamer colors:

- **normal text** (dark fg, light bg)
- **alerted text** (colored fg, should be visible against dark or light)
- **example text** (colored fg, should be visible against dark or light)

An easy way to customize the theme is to redefine these colors using

```
\setbeamercolor{ ... }{ fg= ... , bg= ... }
```

in your preamble. For greater customization, you can redefine any of the other stock beamer colors. In addition to the stock colors the theme defines a number of **ru** specific colors, which can also be redefined to your liking.

```
\setbeamercolor{progress bar}{ ... }
\setbeamercolor{title separator}{ ... }
\setbeamercolor{progress bar in head/footer}{ ... }
\setbeamercolor{progress bar in section page}{ ... }
```

## 3.3 Font Customization

The default font for **ru** is **Fira**. This can be easily changed using the standard font selection commands of the **fontspec** package. So if you prefer, for example, the **Ubuntu** font family, just add the following two commands after loading the **ru** theme.

```
\setsansfont{Ubuntu}
```

```
\setmonofont{Ubuntu Mono}
```

If you are expecting to present in a large room or with an underpowered projector, you may want to change the font to a heavier weight of Fira to maximize readability.

```
\setsansfont[BoldFont={Fira Sans SemiBold}]{Fira Sans Book}
```

### 3.3.1 Old style figures

The regular fontspec mechanism for changing glyph appearance applies also to this theme. If you want to have old style figures in the text but regular lined figures for math, you could add the following to your preamble:

```
\usefonttheme{professionalfonts} % required for mathspec
\usepackage{mathspec}
\setsansfont[BoldFont={Fira Sans},
             Numbers={OldStyle}]{Fira Sans Light}
\setmathsfon(Digits)[Numbers={Lining, Proportional}]{Fira
  Sans Light}
```

## 3.4 Commands

### 3.4.1 Standout frames

The **ru** inner theme offers a custom frame format with large, centered text and an inverted background — perfect for focusing attention on single sentence or image. To use it, add the key **standout** to the frame:

```
\begin{frame}[standout]
  Thank you!
\end{frame}
```

## 4 pgfplots integration

**ru** comes with a set of pre-defined pgfplots styles and a color theme based on Paul Tol's color scheme.

### 4.1 Styles

Pass the following style keys to the axis environment to get the appropriate effect:

`mlineplot` Plot regular line charts with reduced axis frames, less intrusive legend and subdued grid.

`mbarplot` Plot vertical bar charts in a similar way as `mlineplot` but reduce grid usage.

`horizontal mbarplot` Plot horizontal bar charts.

`disable thousands separator` Helper style to remove thousands separator.

## 5 Tips & Tricks

### 5.1 Backup Slides

Speakers will often include extra slides at the end of their presentation to refer to during audience questions. One easy way to do this is to include the `appendixnumberbeamer` package in your preamble and call `\appendix` before your backup slides.

**ru** will automatically turn off slide numbering and progress bars for slides in the appendix.

## 6 Known Issues

### 6.1 Title formats

Be aware that not every font supports small caps, so the `smallcaps` or `allsmallcaps` options may not work if you use a font other than `Fira Sans`.

In particular, the Computer Modern sans-serif typeface, which is used when **ru** is compiled with pdfL<sup>A</sup>T<sub>E</sub>X, does not have a small-caps variant.

The title format options `allsmallcaps` and `allcaps` are quite nice from an aesthetic point of view, but their use of `\MakeLowercase` and `\MakeUppercase` can cause unexpected problems. For example:

- Some commands, like `\`, do not work inside `\MakeLowercase` and `\MakeUppercase`. (See [#125](#))
- Only alphabetic characters are affected by `\MakeLowercase`, so numerals and punctuation remain at full height. This can spoil some of the aesthetic benefits of `allsmallcaps`. (See [#33](#))
- `\MakeLowercase` and `\MakeUppercase` apply to math mode and `\scshape` does not. This can easily introduce mathematical errors that are hard to catch.
- It is impossible to typeset symbols which are encoded as uppercase letters in a different font. In particular, `\mathbb` and `\mathcal` letters will be replaced by other math glyphs. (See [#153](#))

The `allsmallcaps` and `allcaps` options are safe to use if your titles contain only alphabetic characters and do not require the expansion of any macros.

## 6.2 Interactions with other color themes

**ru** can be used along with any other Beamer color theme, such as **crane** or **seahorse**. If you wish to do this, it is usually best to include the **ru** subpackages individually so the **ru** color theme is never loaded. This will prevent conflicts between the **ru** color theme and your preferred theme.

For example, overriding the color theme as follows may not work as expected because `\usetheme{ru}` loads the **ru** color theme, which defines a relationship between the frametitle background and the primary palette of the theme. Since **seahorse** assumes a different relationship between its palettes, the result is a grey, rather than periwinkle, frametitle background.

```
\usetheme{ru}
\usecolortheme{seahorse}
```

The correct colors are chosen if the **ru** outer, inner, and font themes are loaded separately:

```
\useoutertheme{ru}
\useinnertheme{ru}
\usefonttheme{ru}
\usecolortheme{seahorse} % or your preferred color theme
```

Please note that **ru** may not use all the colors defined in your favourite Beamer color theme. In particular, **ru** does not set a background color for the title; this will cause issues when using color themes like **whale** which set a white foreground for the title.

### 6.3 Notes on second screen

If you use the `[show notes on second screen]` option built in to Beamer and compile with  $\text{\LaTeX}$ , text on slides following the first section slide may be rendered in white instead of the regular colour. This is due to a bug in Beamer or  $\text{\LaTeX}$  itself. You can work around it either by compiling with  $\text{\LuaTeX}$  or by adding the following code to your preamble to reset the text color on each slide.

```
\makeatletter
\def\beamer@frametnotesbegin{% at beginning of slide
    \usebeamercolor[fg]{normal text}
    \gdef\beamer@noteitems{}%
    \gdef\beamer@notes{}%
}
\makeatother
```

### 6.4 Standout frames with labels

Because the **standout** frame option creates a group to restrict the colour change to a single slide, labels defined after calling **standout** will stay local to the group. In other words, the following may result in a “label undefined” error.

```
\begin{frame}[standout, label=conclusion]{Conclusion}
```

```
Awesome slide
\end{frame}
```

To fix this problem, change the order of the keys in the frame.

```
\begin{frame}[label=conclusion, standout]{Conclusion}
  Awesome slide
\end{frame}
```

This error can be unwittingly triggered if you export your slides from Emacs Org mode, which automatically adds labels after frame options. Alex Branham [offers](#) the following solution for Org mode users, using `org-set-property`.

```
* Start of a frame
:PROPERTIES:
:BEAMER_opt: label=conclusion,standout
:END:
```

## 6.5 Standout frames with Pandoc

With Pandoc versions prior 1.17.2 it was not possible to create standout frames because Pandoc only supported a specific list of frame attributes thus ignoring additional attributes such as `{.standout}`.

## 7 License

**ru** is licensed under a [Creative Commons Attribution-ShareAlike 4.0 International License](#). This means that if you change the theme and re-distribute it, you must retain the copyright notice header and license it under the same CC-BY-SA license. This does not affect any presentations that you create with the theme.

## 8 Implementation

### 8.1 ru parent theme

The primary job of this package is to load the component sub-packages of the **ru** theme and route the theme options accordingly. It also provides some custom commands and environments for the user.

#### 8.1.1 Package dependencies

```
1 \RequirePackage{etoolbox}
2 \RequirePackage{pgfopts}
```

#### 8.1.2 Options

Most options are passed off to the component sub-packages.

```
3 \pgfkeys{/ru/.cd,
4   .search also={
5     /ru/inner,
6     /ru/outer,
7     /ru/color,
8     /ru/font,
9   }
10 }
```

`titleformat plain` Controls the formatting of the text on standout “plain” frames.

```
11 \pgfkeys{
12   /ru/titleformat plain/.cd,
13   .is choice,
14   regular/.code={%
15     \let\ru@plaintitleformat\@empty%
16     \setbeamerfont{standout}{shape=\normalfont}%
17   },
18   smallcaps/.code={%
19     \let\ru@plaintitleformat\@empty%
20     \setbeamerfont{standout}{shape=\scshape}%
21   },
22   allsmallcaps/.code={%
```

```

23     \let\ru@plaintitleformat\MakeLowercase%
24     \setbeamerfont{standout}{shape=\scshape}%
25     \PackageWarning{beamerthemenu}{%
26       Be aware that titleformat plain=allsmallcaps can lead to problems%
27     }
28   },
29   allcaps/.code={%
30     \let\ru@plaintitleformat\MakeUppercase%
31     \setbeamerfont{standout}{shape=\normalfont}%
32     \PackageWarning{beamerthemenu}{%
33       Be aware that titleformat plain=allcaps can lead to problems%
34     }
35   },
36 }

```

**titleformat** Sets a standard format for titles, subtitles, section titles, frame titles, and the text on standout “plain” frames.

```

37 \pgfkeys{
38   /ru/titleformat/.code=\pgfkeysalso{
39     font/titleformat title=#1,
40     font/titleformat subtitle=#1,
41     font/titleformat section=#1,
42     font/titleformat frame=#1,
43     titleformat plain=#1,
44   }
45 }

```

For backwards compatibility with earlier betas of the theme, we implement deprecated option names as aliases to the corresponding **key=value** options.

```

46 \pgfkeys{/ru/.cd,
47   usetitleprogressbar/.code=\pgfkeysalso{outer/progressbar=frametitle},
48   noslidenumbers/.code=\pgfkeysalso{outer/numbering=none},
49   usetotalslideindicator/.code=\pgfkeysalso{outer/numbering=fraction},
50   nosectionslide/.code=\pgfkeysalso{inner/sectionpage=none},
51   darkcolors/.code=\pgfkeysalso{color/background=dark},
52   blockbg/.code=\pgfkeysalso{color/block=fill, inner/block=fill},
53 }

```

Set default values for options.

```
54 \newcommand{\ru@setdefaults}{  
55   \pgfkeys{/ru/.cd,  
56     titleformat plain=regular,  
57   }  
58 }
```

### 8.1.3 Component sub-packages

Having processed the options, we can now load the component sub-packages of the theme.

```
59 \useinnertheme{ru}  
60 \useoutertheme{ru}  
61 \usecolortheme{ru}  
62 \usefonttheme{ru}
```

The `tol` theme for `pgfplots` is only loaded if `pgfplots` is used.

```
63 \AtEndPreamble{%  
64   \ifpackageloaded{pgfplots}{%  
65     \RequirePackage{pgfplotsthemetol}  
66   }{}  
67 }
```

### 8.1.4 Custom commands

The parent theme defines custom commands as their proper usage may depend on multiple sub-packages.

**\ruet** Allows the user to change options midway through a presentation.

```
68 \newcommand{\ruet}[1]{\pgfkeys{/ru/.cd,#1}}
```

**\plain** Creates a plain frame with dark background, suitable for displaying images or a few words. The format of the text can be set with the `titleformat plain` option.

```
69 \def\ru@plaintitleformat#1{#1}  
70 \newcommand{\plain}[2][]{%  
71   \PackageWarning{beamerthemeru}{%
```

```

72   The syntax `\plain' may be deprecated in a future version of Metropolis.
73   Please use a frame with [standout] instead.
74 }
75 \begin{frame}[standout]{#1}
76   \ru@plaintitleformat{#2}
77 \end{frame}
78 }

```

`\rereducelistspacing`

```

79 \newcommand{\rereducelistspacing}{\vspace{-\topsep}}

```

### 8.1.5 Process package options

```

80 \ru@setdefaults
81
82 \pgfdeclareimage[width=\paperwidth,height=\paperheight]{bg}{ru_background.png}
83 \setbeamertemplate{background}{\pgfuseimage{bg}}
84 % \titlegraphic{\hfill\includegraphics[height=1.5cm]{ru_old-logo.png}}
85 \titlegraphic{\hfill\includegraphics[height=1cm]{ru_logo.png}}
86
87 \ProcessPgfOptions{/ru}

```

## 8.2 ru inner theme

A beamer inner theme dictates the style of the frame elements traditionally set in the “body” of each slide. These include:

- title, part, and section pages;
- itemize, enumerate, and description environments;
- block environments including theorems and proofs;
- figures and tables; and
- footnotes and plain text.

### 8.2.1 Package dependencies

```

88 \RequirePackage{etoolbox}
89 \RequirePackage{keyval}
90 \RequirePackage{calc}
91 \RequirePackage{pgfopts}

```

```
92 \RequirePackage{tikz}
```

### 8.2.2 Options

**sectionpage** Optionally add a slide marking the beginning of each section.

```
93 \pgfkeys{
94   /ru/inner/sectionpage/.cd,
95   .is choice,
96   none/.code=\ru@disablesectionpage,
97   simple/.code={\ru@enablesectionpage
98                 \setbeamertemplate{section page}[simple]},
99   progressbar/.code={\ru@enablesectionpage
100                     \setbeamertemplate{section page}[progressbar]},
101 }
```

**subsectionpage** Optionally add a slide marking the beginning of each subsection.

```
102 \pgfkeys{
103   /ru/inner/subsectionpage/.cd,
104   .is choice,
105   none/.code=\ru@disablesubsectionpage,
106   simple/.code={\ru@enablesubsectionpage
107                 \setbeamertemplate{section page}[simple]},
108   progressbar/.code={\ru@enablesubsectionpage
109                     \setbeamertemplate{section page}[progressbar]},
110 }
```

**\ru@inner@setdefaults** Set default values for inner theme options.

```
111 \newcommand{\ru@inner@setdefaults}{
112   \pgfkeys{/ru/inner/.cd,
113     sectionpage=progressbar,
114     subsectionpage=none
115   }
116 }
```

### 8.2.3 Title page

**title page** Template for the title page. Each element is only typset if it is defined by the user. If `\subtitle` is empty, for example, it won't leave a blank space on the title

slide.

```
117 \setbeamertemplate{title page}{
118   \begin{minipage}[b][\paperheight]{\textwidth}
119   \ifx\inserttitlegraphic\@empty\else\usebeamertemplate*{title graphic}\fi
120   \vfill%
121   \ifx\inserttitle\@empty\else\usebeamertemplate*{title}\fi
122   \ifx\insertsubtitle\@empty\else\usebeamertemplate*{subtitle}\fi
123   \usebeamertemplate*{title separator}
```

Beamer's definition of `\insertauthor` is always nonempty, so we have to test another macro initialized by `\author{...}` to see if the user has defined an author. This solution was suggested by Enrico Gregorio in an answer to [this Stack Exchange question](#).

```
124   \ifx\beamer@shortauthor\@empty\else\usebeamertemplate*{author}\fi
125   \ifx\insertdate\@empty\else\usebeamertemplate*{date}\fi
126   \ifx\insertinstitute\@empty\else\usebeamertemplate*{institute}\fi
127   \vfill
128   \vspace*{1mm}
129 \end{minipage}
130 }
```

Normal people should use `\maketitle` or `\titlepage` instead of using the `title page` beamer template directly. Beamer already defines these macros, but we patch them here to make the title page `[plain]` by default, remove `\@thanks`, and ensure the title frame number doesn't count.

`\maketitle` Inserts the title frame, or causes the current frame to use the `title page` template.

```
\titlepage
131 \def\maketitle{%
132   \ifbeamer@inframe
133     \titlepage
134   \else
135     \frame[plain,noframenumering]{\titlepage}
136   \fi
137 }
138 \def\titlepage{%
139   \usebeamertemplate{title page}
140 }
```

**title graphic** Set the title graphic in a zero-height box, so it doesn't change the position of other elements.

```
141 \setbeamertemplate{title graphic}{
142   \vbox to 0pt {
143     \vspace*{2em}
144     \inserttitlegraphic%
145   }%
146   \nointerlineskip%
147 }
```

**title** Set the title on the title page.

```
148 \setbeamertemplate{title}{
149   \raggedright%
150   \linespread{1.0}%
151   \inserttitle%
152   \par%
153   \vspace*{0.5em}
154 }
```

**subtitle** Set the subtitle on the title page.

```
155 \setbeamertemplate{subtitle}{
156   \raggedright%
157   \insertsubtitle%
158   \par%
159   \vspace*{0.5em}
160 }
```

**title separator** Template to set the title graphic in a zero-height box. (It won't change the position of other elements.)

```
161 \newlength{\ru@titleseparator@linewidth}
162 \setlength{\ru@titleseparator@linewidth}{1pt}
163 \setbeamertemplate{title separator}{
164   \begin{tikzpicture}
165     \fill[fg] (0,0) rectangle (\textwidth, \ru@titleseparator@linewidth);
166   \end{tikzpicture}%
167   \par%
168 }
```

**author** Set the author on the title page.

```
169 \setbeamertemplate{author}{  
170   \vspace*{2em}  
171   \insertauthor%  
172   \par%  
173   \vspace*{0.25em}  
174 }
```

**date** Set the date on the title page.

```
175 \setbeamertemplate{date}{  
176   \insertdate%  
177   \par%  
178 }
```

**institute** Set the institute on the title page.

```
179 \setbeamertemplate{institute}{  
180   \vspace*{3mm}  
181   \insertinstitute%  
182   \par%  
183 }
```

#### 8.2.4 Section page

**section page** Template for the section title slide at the beginning of each section.

```
184 \defbeamertemplate{section page}{simple}{  
185   \begin{center}  
186     \usebeamercolor[fg]{section title}  
187     \usebeamerfont{section title}  
188     \insertsectionhead\par  
189     \ifx\insertsubsectionhead\@empty\else  
190       \usebeamercolor[fg]{subsection title}  
191       \usebeamerfont{subsection title}  
192       \insertsubsectionhead  
193     \fi  
194   \end{center}  
195 }  
196 \defbeamertemplate{section page}{progressbar}{
```

```

197 \centering
198 \begin{minipage}{22em}
199   \raggedright
200   \usebeamercolor[fg]{section title}
201   \usebeamerfont{section title}
202   \insertsectionhead\[-1ex]
203   \usebeamertemplate*{progress bar in section page}
204   \par
205   \ifx\insertsubsectionhead\@empty\else%
206     \usebeamercolor[fg]{subsection title}%
207     \usebeamerfont{subsection title}%
208     \insertsubsectionhead
209   \fi
210 \end{minipage}
211 \par
212 \vspace{\baselineskip}
213 }
214 \newcommand{\ru@disablesectionpage}{
215   \AtBeginSection{
216     % intentionally empty
217   }
218 }
219 \newcommand{\ru@enablesectionpage}{
220   \AtBeginSection{
221     \ifbeamer@inframe
222       \sectionpage
223     \else
224       \frame[plain,c,noframenumbering]{\sectionpage}
225     \fi
226   }
227 }

```

**subsection page** Template for the subsection title slide that can optionally be added to at the beginning of each subsection.

```

228 \setbeamertemplate{subsection page}{%
229   \usebeamertemplate*{section page}
230 }
231 \newcommand{\ru@disablesubsectionpage}{
232   \AtBeginSubsection{

```

```

233     % intentionally empty
234 }
235 }
236 \newcommand{\ru@enablesubsectionpage}{
237   \AtBeginSubsection{
238     \ifbeamer@inframe
239       \subsectionpage
240     \else
241       \frame[plain,c,noframenumbering]{\subsectionpage}
242     \fi
243   }
244 }

```

**progress bar in section page** Template for the progress bar displayed by default on the section page. This code is duplicated in large part in the outer theme's template progress bar in head/foot.

```

245 \newlength{\ru@progressonsectionpage}
246 \newlength{\ru@progressonsectionpage@linewidth}
247 \setlength{\ru@progressonsectionpage@linewidth}{1pt}
248 \setbeamertemplate{progress bar in section page}{
249   \setlength{\ru@progressonsectionpage}{%
250     \textwidth * \ratio{\insertframenum pt}{\inserttotalframenum pt}}%
251   }%
252   \begin{tikzpicture}
253     \fill[bg] (0,0) rectangle (\textwidth, \ru@progressonsectionpage@linewidth);
254     \fill[fg] (0,0) rectangle (\ru@progressonsectionpage, \ru@progressonsectionpage@linewidth);
255   \end{tikzpicture}%
256 }

```

The above code assumes that `\insertframenum` is less than or equal to `\inserttotalframenum`. However, this is not true on the first compile; in the absence of an `.aux` file, `\inserttotalframenum` defaults to 1. This behaviour could cause fatal errors for long presentations, as `\ru@progressonsectionpage` would exceed TeX's maximum length (16383.99999pt, roughly 5.75 metres or 18.9 feet). To avoid this, we increase the default value for `\inserttotalframenum`; presentations with over 4000 slides will still break on first compile, but users in that situation likely have deeper problems to solve.

```

257 \def\inserttotalframenum{100}

```

### 8.2.5 Block environments

`block` The three different block environments differ only in their colours. Rather than  
`block alerted` repeat the essentially the same template three times, we use the auxiliary macro  
`block example` `\ru@block` to define all three templates.

```

258 \newlength{\ru@blocksep}
259 \newlength{\ru@blockadjust}
260 \setlength{\ru@blocksep}{0.75ex}
261 \setlength{\ru@blockadjust}{0.25ex}
262 \providecommand{\ru@strut}{%
263   \vphantom{ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz}}%
264 }
265 \newcommand{\ru@block}[1]{
266   \par\vskip\medskipamount%
267   \setlength{\parskip}{0pt}

```

If a background color is defined for the block title or body, we need to add a little bit of padding to the corresponding box. Ideally, this would be accomplished by setting `colsep=0.75ex`, which is intended to add “color separation space” only when the box has a colored background. Unfortunately, `colsep` also adds this separation if the background color is inherited, even if the inherited color is actually empty. (The technical reason for this boils down to the fact that the `\ifx` directive does not expand macros.)

To achieve the correct spacing for `alertblocks` and `exampleblocks` as well as for normal blocks, we have to begin the `beamercolorbox` differently based on whether `block title` has an empty background.

If the `block title` background is empty, or the user has explicitly removed the background from (e.g.) `block title alerted`, we just need to set a `rightskip` for a nice ragged-right block title.

```

268 \ifbeamercoloreempty[bg]{block title#1}{%
269   \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}}{%
270   \ifbeamercoloreempty[bg]{block title}{%
271     \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}%
272   }%
273 %   \end{macrocode}
274 %
275 %   Otherwise, if the |block title| has a background, we set the padding based

```

```

276 % on |\ru@blockskip|. However, we have to visually compensate for
277 % the |\ru@strut| added to the block title (see below) by
278 % subtracting |\ru@blockadjust| from the top and bottom padding.
279 %
280 % \begin{macrocode}
281 {%
282   \begin{beamercolorbox}[
283     sep=\dimexpr\ru@blocksep-\ru@blockadjust\relax,
284     leftskip=\ru@blockadjust,
285     rightskip=\dimexpr\ru@blockadjust plus 4em\relax
286   ]{block title#1}%
287 }%
288 % \end{macrocode}
289 %
290 % We can now set the contents of the |block title|. The zero-width but
291 % positive-height box |\ru@strut| ensures that the block title box
292 % has a consistent height, even if it lacks punctuation, ascenders, or
293 % descenders.
294 %
295 % \begin{macrocode}
296   \usebeamerfont*{block title#1}%
297   \ru@strut%
298   \insertblocktitle%
299   \ru@strut%
300 \end{beamercolorbox}%
301 % \end{macrocode}
302 %
303 % Next, we typeset the |block body|. This the code is similar to, but simpler
304 % than, the |block title| code since we don't need to adjust for any struts.
305 %
306 % \begin{macrocode}
307 \nointerlineskip%
308 \ifbeamercoloreempty[bg]{block body#1}{%
309   \begin{beamercolorbox}[vmode]{block body#1}{%
310 \ifbeamercoloreempty[bg]{block body}{%
311   \begin{beamercolorbox}[vmode]{block body#1}%
312 }{%
313   \begin{beamercolorbox}[sep=\ru@blocksep, vmode]{block body#1}%
314   \vspace{-\ru@parskip}
315 }%

```

```

316     \usebeamerfont{block body#1}%
317     \setlength{\parskip}{\ru@parskip}%
318 }

```

This concludes the auxiliary macro `\ru@block`. Finally, we define the block beamer templates using this macro.

```

319 \setbeamertemplate{block begin}{\ru@block{}}
320 \setbeamertemplate{block alerted begin}{\ru@block{ alerted}}
321 \setbeamertemplate{block example begin}{\ru@block{ example}}
322 \setbeamertemplate{block end}{\end{beamercolorbox}\vspace*{0.2ex}}
323 \setbeamertemplate{block alerted end}{\end{beamercolorbox}\vspace*{0.2ex}}
324 \setbeamertemplate{block example end}{\end{beamercolorbox}\vspace*{0.2ex}}

```

## 8.2.6 Lists and floats

```

325 \setbeamertemplate{itemize items}{\textbullet}
326 \setbeamertemplate{caption label separator}{: }
327 \setbeamertemplate{caption}[numbered]

```

## 8.2.7 Footnotes

```

328 \setbeamertemplate{footnote}{%
329   \parindent 0em\noindent%
330   \raggedright
331   \usebeamercolor{footnote}\hbox to 0.8em{\hfil\insertfootnotemark}\insertfootnotetext\par%
332 }

```

## 8.2.8 Text and spacing settings

```

333 \newlength{\ru@parskip}
334 \setlength{\ru@parskip}{0.5em}
335 \setlength{\parskip}{\ru@parskip}
336 \linespread{1.15}

```

By default, Beamer frames offer the `c` option to *almost* vertically center the text, but the placement is a little too high. To fix this, we redefine the `c` option to equalize `\beamer@frametopskip` and `\beamer@framebottomskip`. This solution was suggested by Enrico Gregorio in an answer to [this Stack Exchange question](#).

```

337 \define@key{beamerframe}{c}[true]{% centered
338   \beamer@frametopskip=0pt plus 1fill\relax%
339   \beamer@framebottomskip=0pt plus 1fill\relax%

```

```

340 \beamer@frametopskipautobreak=0pt plus .4\paperheight\relax%
341 \beamer@framebottomskipautobreak=0pt plus .6\paperheight\relax%
342 \def\beamer@initfirstlineunskip{}%
343 }

```

### 8.2.9 Standout frames

**ru** offers a custom frame format with large, centered text and an inverted background. To use it, add the key **standout** to the frame: `\begin{frame}[standout] ... \end{frame}`.

**standout** Optional arguments to Beamer's frames are implemented using `\define@key` from the **keyval** package, which will execute code when the defined option is called. For the **standout** option, we begin a group, change the colors and fonts, and set a alignment.

```

344 \providebool{ru@standout}
345 \define@key{beamerframe}{standout}[true]{%
346   \booltrue{ru@standout}
347   \begingroup
348     \setkeys{beamerframe}{c}
349     \setkeys{beamerframe}{noframenumbering}
350     \ifbeamercoloreempty{bg}{palette primary}{
351       \setbeamercolor{background canvas}{
352         use=palette primary,
353         bg=-palette primary.fg
354       }
355     }{
356       \setbeamercolor{background canvas}{
357         use=palette primary,
358         bg=palette primary.bg
359       }
360     }
361   \centering
362   \usebeamercolor{fg}{palette primary}
363   \usebeamerfont{standout}
364 }

```

Then we just have to close the group after the standout slide is finished in order to restore the colours and fonts for the rest of the presentation. Unfortunately, we cannot use or this (see

<http://tex.stackexchange.com/questions/226319/>). Instead, we add the `\endgroup` to `\beamer@reseteecodes`, which is run exactly once at the end of each slide.

```

365 \apptocmd{\beamer@reseteecodes}{%
366   \ifbool{ru@standout}{
367     \endgroup
368     \boolfalse{ru@standout}
369   }{}
370 }{}{}

```

### 8.2.10 Process package options

```

371 \ru@inner@setdefaults
372 \ProcessPgfPackageOptions{/ru/inner}

```

## 8.3 ru outer theme

A `beamer` outer theme dictates the style of the frame elements traditionally set outside the body of each slide: the head, footline, and frame title.

### 8.3.1 Package dependencies

```

373 \RequirePackage{etoolbox}
374 \RequirePackage{calc}
375 \RequirePackage{pgfopts}

```

### 8.3.2 Options

**numbering** Adds slide numbers to the bottom right of each slide.

```

376 \pgfkeys{
377   /ru/outer/numbering/.cd,
378   .is choice,
379   none/.code=\setbeamertemplate{frame numbering}[none],
380   counter/.code=\setbeamertemplate{frame numbering}[counter],
381   fraction/.code=\setbeamertemplate{frame numbering}[fraction],
382 }

```

**progressbar** Adds a progress bar to the top, bottom, or frametitle of each slide.

```

383 \pgfkeys{
384   /ru/outer/progressbar/.cd,
385   .is choice,
386   none/.code={%
387     \setbeamertemplate{headline}[plain]
388     \setbeamertemplate{frametitle}[plain]
389     \setbeamertemplate{footline}[plain]
390   },
391   head/.code={\pgfkeys{/ru/outer/progressbar=none}
392     \addtobeamertemplate{headline}{}{%
393       \usebeamertemplate*{progress bar in head/foot}
394     }
395   },
396   frametitle/.code={\pgfkeys{/ru/outer/progressbar=none}
397     \addtobeamertemplate{frametitle}{}{%
398       \usebeamertemplate*{progress bar in head/foot}
399     }
400   },
401   foot/.code={\pgfkeys{/ru/outer/progressbar=none}
402     \addtobeamertemplate{footline}{}{%
403       \usebeamertemplate*{progress bar in head/foot}%
404     }
405   },
406 }

```

`\ru@outer@setdefaults` Sets default values for outer theme options.

```

407 \newcommand{\ru@outer@setdefaults}{
408   \pgfkeys{/ru/outer/.cd,
409     numbering=counter,
410     progressbar=frametitle,
411   }
412 }

```

### 8.3.3 Head and footline

All good **beamer** presentations should already remove the navigation symbols, but **ru** removes them automatically (just in case).

```

413 \setbeamertemplate{navigation symbols}{}

```

**frame numbering** Templates for the frame number. Can be omitted, shown or displayed as a fraction of the total frames.

```

414 \defbeamertemplate{frame footer}{none}{}
415 \defbeamertemplate{frame footer}{custom}[1]{ #1 }

416 \defbeamertemplate{frame numbering}{none}{}
417 \defbeamertemplate{frame numbering}{counter}{\insertframenumbers}
418 \defbeamertemplate{frame numbering}{fraction}{\insertframenumbers/\inserttotalframenumbers}

```

**headline** Templates for the head- and footline at the top and bottom of each frame.

**footline**

```

419 \defbeamertemplate{headline}{plain}{}
420 \defbeamertemplate{footline}{plain}{%
421   \begin{beamercolorbox}[wd=\textwidth, sep=3ex]{footline}%
422     \usebeamerfont{page number in head/foot}%
423     \usebeamertemplate*{frame footer}
424     \hfill%
425     \usebeamertemplate*{frame numbering}
426   \end{beamercolorbox}%
427 }

```

### 8.3.4 Frametitle

**frametitle** Templates for the frame title, which is optionally underlined with a progress bar.

```

428 \newlength{\ru@frametitle@padding}
429 \newlength{\ru@frametitle@paddingleft}
430 \setlength{\ru@frametitle@padding}{1.5ex}
431 \setlength{\ru@frametitle@paddingleft}{2.2ex}
432 \newcommand{\ru@frametitlestrut@start}{
433   \rule{0pt}{\ru@frametitle@padding +%
434     \totalheightof{%
435       \ifcsdef{ru@frametitleformat}{\ru@frametitleformat X}{X}%
436     }%
437   }%
438 }
439 \newcommand{\ru@frametitlestrut@end}{
440   \rule[-\ru@frametitle@padding]{0pt}{\ru@frametitle@padding}
441 }
442 \defbeamertemplate{frametitle}{plain}{%

```

```

443 \nointerlineskip%
444 \begin{beamercolorbox}[%
445     wd=\paperwidth,%
446     sep=0pt,%
447     leftskip=\ru@frametitle@paddingleft,%
448     rightskip=\ru@frametitle@padding,%
449     ]{frametitle}%
450 \ru@frametitlestrut@start%
451 \insertframetitle%
452 \nolinebreak%
453 \ru@frametitlestrut@end%
454 \end{beamercolorbox}%
455 }
456 \setbeamertemplate{frametitle continuation}{%
457     \usebeamerfont{frametitle}
458     \romannumeral \insertcontinuationcount
459 }

```

**progress bar in head/foot** Template for the progress bar optionally displayed below the frame title on each page. Much of this code is duplicated in the inner theme's template **progress bar in section** page.

```

460 \newlength{\ru@progressinheadfoot}
461 \newlength{\ru@progressinheadfoot@linewidth}
462 \setlength{\ru@progressinheadfoot@linewidth}{1.4pt}
463 \setbeamertemplate{progress bar in head/foot}{
464     \nointerlineskip
465     \setlength{\ru@progressinheadfoot}{%
466         \paperwidth * \ratio{\insertframenumber pt}{\inserttotalframenumber pt}}%
467     }%
468     \begin{beamercolorbox}[wd=\paperwidth]{progress bar in head/foot}
469         \begin{tikzpicture}
470             \fill[bg] (0,0) rectangle (\paperwidth, \ru@progressinheadfoot@linewidth);
471             \fill[fg] (0,0) rectangle (\ru@progressinheadfoot, \ru@progressinheadfoot@linewidth);
472         \end{tikzpicture}%
473     \end{beamercolorbox}
474 }

```

**appendix** Removes page numbering and per-slide progress bars when `\appendix` is called. This makes it easier to include additional “backup slides” at the end of the pre-

sensation, especially in conjunction with the package `appendixnumberbeamer`.

```
475 \AtBeginDocument{%
476   \apptocmd{\appendix}{%
477     \pgfkeys{%
478       /ru/outer/.cd,
479       numbering=none,
480       progressbar=none}
481   }{}{}
482 }
```

### 8.3.5 Process package options

```
483 \ru@outer@setdefaults
484 \ProcessPgfPackageOptions{/ru/outer}
```

## 8.4 ru font theme

A beamer font theme sets the style of the font used in the document.

### 8.4.1 Package dependencies

```
485 \RequirePackage{etoolbox}
486 \RequirePackage{ifxetex}
487 \RequirePackage{ifluatex}
488 \RequirePackage{pgfopts}
```

### 8.4.2 Load Fira fonts

If the presentation is compiled with Xe<sub>La</sub>T<sub>E</sub>X or Lua<sub>La</sub>T<sub>E</sub>X, the `fontspec` package is loaded and we search for the Fira fonts.

```
489 \ifboolexpr{bool {xetex} or bool {luatex}}{
490   \@ifpackageloaded{fontspec}{
491     \PassOptionsToPackage{no-math}{fontspec}
492   }{
493     \RequirePackage[no-math]{fontspec}
494   }
```

`\checkfont` Checks if a font is installed; if not, `fontsnofound` is increased.

```

495 \newcounter{fontsnofound}
496 \newcommand{\checkfont}[1]{%
497   \suppressfontnotfounderror=1%
498   \font\x = "#1" at 10pt
499   \selectfont
500   \ifx\x\nullfont%
501     \stepcounter{fontsnofound}%
502   \fi%
503   \suppressfontnotfounderror=0%
504 }
505

```

`\iffontsavailable` Resets the `fontsnofound` counter and calls `\checkfont` for each font in the comma separated list in the first argument.

```

506 \newcommand{\iffontsavailable}[3]{%
507   \setcounter{fontsnofound}{0}%

515 }

```

We search for regular, italic, light, light italic, mono, and mono bold fonts under the default `Fira Sans` and `Fira Mono` names. If this fails, the suffix `OT` — used by some Linux distributions — will be tried. If this also fails, a warning will be displayed and the standard fonts will be used.

```

516 \iffontsavailable{Fira Sans Light,%
517                  Fira Sans Light Italic,%
518                  Fira Sans,%

529                     Fira Sans Italic OT}%
530   {%
531     \setsansfont[ItalicFont={Fira Sans Light Italic OT},%
532                  BoldFont={Fira Sans OT},%
533                  BoldItalicFont={Fira Sans Italic OT}]%
534                  {Fira Sans Light OT}%
535   }{%
536     \PackageWarning{beamerthemeru}{%
537       Could not find Fira Sans fonts%
538     }
539   }
540 }
541 \iffontsavailable{Fira Mono, Fira Mono Bold}{%
542   \setmonofont[BoldFont={Fira Mono Medium}]{Fira Mono}%
543 }{%
544   \iffontsavailable{Fira Mono OT, Fira Mono Bold OT}{%
545     \setmonofont[BoldFont={Fira Mono Medium OT}]{Fira Mono OT}%
546   }{%
547     \PackageWarning{beamerthemeru}{%
548       Could not find Fira Mono fonts%
549     }
550   }
551 }
552 \AtBeginEnvironment{tabular}{%
553   \addfontfeature{Numbers={Monospaced}}}%
554 }
555 }{%
556   \PackageWarning{beamerthemeru}{%
557     You need to compile with XeLaTeX or LuaLaTeX to use the Fira fonts%
558   }
559 }

```

This concludes the portion of the code which is only run when compiled with Xe<sub>La</sub>T<sub>E</sub>X or Lua<sub>La</sub>T<sub>E</sub>X. The remainder of this package applies regardless of the compiling engine.

### 8.4.3 General font definitions

```
560 \setbeamerfont{title}{size=\Large,%  
561             series=\bfseries}  
562 \setbeamerfont{author}{size=\small}  
563 \setbeamerfont{date}{size=\small}  
564 \setbeamerfont{section title}{size=\Large,%  
565             series=\bfseries}  
566 \setbeamerfont{block title}{size=\normalsize,%  
567             series=\bfseries}  
568 \setbeamerfont{block title alerted}{size=\normalsize,%  
569             series=\bfseries}  
570 \setbeamerfont*{subtitle}{size=\large}  
571 \setbeamerfont{frametitle}{size=\large,%

585 \setbeamerfont{standout}{size=\Large,%  
586             series=\bfseries}
```

### 8.4.4 Title format options

`titleformat title` Controls the format of the title.

```
587 \pgfkeys{  
588   /ru/font/titleformat title/.cd,  
589   .is choice,  
590   regular/.code={%  
591     \let\ru@titleformat\@empty%  
592     \setbeamerfont{title}{shape=\normalfont}%  
593   },
```

```

594     smallcaps/.code={%
595         \let\ru@titleformat\@empty%
596         \setbeamerfont{title}{shape=\scshape}%
597     },
598     allsmallcaps/.code={%
599         \let\ru@titleformat\lowercase%
600         \setbeamerfont{title}{shape=\scshape}%
601         \PackageWarning{beamerthemerru}{%
602             Be aware that titleformat title=allsmallcaps can lead to problems%
603         }
604     },
605     allcaps/.code={%
606         \let\ru@titleformat\uppercase%
607         \setbeamerfont{title}{shape=\normalfont}%
608         \PackageWarning{beamerthemerru}{%
609             Be aware that titleformat title=allcaps can lead to problems%
610         }
611     },
612 }

```

`titleformat subtitle` Control the format of the subtitle.

```

613 \pgfkeys{
614     /ru/font/titleformat subtitle/.cd,
615     .is choice,
616     regular/.code={%
617         \let\ru@subtitleformat\@empty%
618         \setbeamerfont{subtitle}{shape=\normalfont}%
619     },
620     smallcaps/.code={%
621         \let\ru@subtitleformat\@empty%
622         \setbeamerfont{subtitle}{shape=\scshape}%
623     },
624     allsmallcaps/.code={%
625         \let\ru@subtitleformat\lowercase%
626         \setbeamerfont{subtitle}{shape=\scshape}%
627         \PackageWarning{beamerthemerru}{%
628             Be aware that titleformat subtitle=allsmallcaps can lead to problems%
629         }
630     },

```

```

631 allcaps/.code={%
632   \let\ru@subtitleformat\uppercase%
633   \setbeamerfont{subtitle}{shape=\normalfont}%
634   \PackageWarning{beamerthemenu}{%
635     Be aware that titleformat subtitle=allcaps can lead to problems%
636   }
637 },
638 }

```

`titleformat section` Controls the format of the section title.

```

639 \pgfkeys{
640   /ru/font/titleformat section/.cd,
641   .is choice,
642   regular/.code={%
643     \let\ru@sectiontitleformat\@empty%
644     \setbeamerfont{section title}{shape=\normalfont}%
645   },
646   smallcaps/.code={%
647     \let\ru@sectiontitleformat\@empty%
648     \setbeamerfont{section title}{shape=\scshape}%
649   },
650   allsmallcaps/.code={%
651     \let\ru@sectiontitleformat\MakeLowercase%
652     \setbeamerfont{section title}{shape=\scshape}%
653     \PackageWarning{beamerthemenu}{%
654       Be aware that titleformat section=allsmallcaps can lead to problems%
655     }
656   },
657   allcaps/.code={%
658     \let\ru@sectiontitleformat\MakeUppercase%
659     \setbeamerfont{section title}{shape=\normalfont}%
660     \PackageWarning{beamerthemenu}{%
661       Be aware that titleformat section=allcaps can lead to problems%
662     }
663   },
664 }

```

`frametitleformat` Control the format of the frame title.

```

665 \pgfkeys{

```

```

666 /ru/font/titleformat frame/.cd,
667 .is choice,
668 regular/.code={%
669   \let\ru@frametitleformat\@empty%
670   \setbeamerfont{frametitle}{shape=\normalfont}%
671 },
672 smallcaps/.code={%
673   \let\ru@frametitleformat\@empty%
674   \setbeamerfont{frametitle}{shape=\scshape}%
675 },
676 allsmallcaps/.code={%
677   \let\ru@frametitleformat\MakeLowercase%
678   \setbeamerfont{frametitle}{shape=\scshape}%
679   \PackageWarning{beamerthemeru}{%
680     Be aware that titleformat frame=allsmallcaps can lead to problems%
681   }
682 },
683 allcaps/.code={%
684   \let\ru@frametitleformat\MakeUppercase%
685   \setbeamerfont{frametitle}{shape=\normalfont}%
686   \PackageWarning{beamerthemeru}{%
687     Be aware that titleformat frame=allcaps can lead to problems%
688   }
689 },
690 }

```

`titleformat aliases` Allows `titleformat title` et al. to be used in the `\usetheme` declaration, where L<sup>A</sup>T<sub>E</sub>X automatically removes all spaces.

```

691 \pgfkeys{
692   /ru/font/.cd,
693   titleformattitle/.code=\pgfkeysalso{titleformat title=#1},
694   titleformatsubtitle/.code=\pgfkeysalso{titleformat subtitle=#1},
695   titleformatsection/.code=\pgfkeysalso{titleformat section=#1},
696   titleformatframe/.code=\pgfkeysalso{titleformat frame=#1},
697 }

```

`\ru@font@setdefaults` Sets default values for font theme options.

```

698 \newcommand{\ru@font@setdefaults}{
699   \pgfkeys{/ru/font/.cd,

```

```

700     titleformat title=regular,
701     titleformat subtitle=regular,
702     titleformat section=regular,
703     titleformat frame=regular,
704   }
705 }

```

We first define hooks to change the case format of the titles.

```

706 \def\ru@titleformat#1{#1}
707 \def\ru@subtitleformat#1{#1}
708 \def\ru@sectiontitleformat#1{#1}
709 \def\ru@frametitleformat#1{#1}

```

To make the uppercase and lowercase macros work in the title, subtitle, etc., we have to patch the appropriate `beamer` commands that set their values. This solution was suggested by Enrico Gregorio in an answer to [this StackExchange question](#).

```

710 \patchcmd{\beamer@title}%
711   {\def\inserttitle{#2}}%
712   {\def\inserttitle{\ru@titleformat{#2}}}%
713   {}%
714   {\PackageError{beamerfontthemeru}{Patching title failed}}
715 \patchcmd{\beamer@subtitle}%
716   {\def\insertsubtitle{#2}}%
717   {\def\insertsubtitle{\ru@subtitleformat{#2}}}%
718   {}%
719   {\PackageError{beamerfontthemeru}{Patching subtitle failed}}
720 \patchcmd{\sectionentry}
721   {\def\insertsectionhead{#2}}
722   {\def\insertsectionhead{\ru@sectiontitleformat{#2}}}
723   {}
724   {\PackageError{beamerfontthemeru}{Patching section title failed}}
725 \patchcmd{\beamer@section}
726   {\def\insertsectionhead{\hyperlink{Navigation\the\c@page}{#1}}}
727   {\def\insertsectionhead{\hyperlink{Navigation\the\c@page}{%
728     \ru@sectiontitleformat{#1}}}}
729   {}
730   {\PackageError{beamerfontthemeru}{Patching section title failed}}
731 \patchcmd{\beamer@subsection}

```

```

732 {\def\insertsubsectionhead{\hyperlink{Navigation\the\c@page}{#1}}}
733 {\def\insertsubsectionhead{\hyperlink{Navigation\the\c@page}{%
734   \ru@sectiontitleformat{#1}}}}
735 {}
736 {\PackageError{beamerfontthemeru}{Patching section title failed}}

```

Similarly, to make the `\MakeLowercase` and `\MakeUppercase` macros work in the frame title we have to patch `\beamer@@frametitle`.

```

737 \patchcmd{\beamer@@frametitle}
738   {\beamer@ifempty{#2}{}{%
739     \gdef\insertframetitle{{#2\ifnum\beamer@autobreakcount>0\relax{ }\space%
740       \usebeamertemplate*{frametitle continuation}\fi}}%
741     \gdef\beamer@frametitle{#2}%
742     \gdef\beamer@shortframetitle{#1}%
743   }}
744   {\beamer@ifempty{#2}{}{%
745     \gdef\insertframetitle{{\ru@frametitleformat{#2}\ifnum%
746       \beamer@autobreakcount>0\relax{ }\space%
747       \usebeamertemplate*{frametitle continuation}\fi}}%
748     \gdef\beamer@frametitle{#2}%
749     \gdef\beamer@shortframetitle{#1}%
750   }}
751 {}
752 {\PackageError{beamerfontthemeru}{Patching frame title failed}}

```

#### 8.4.5 Process package options

```

753 \ru@font@setdefaults
754 \ProcessPgfPackageOptions{/ru/font}

```

### 8.5 ru color theme

#### 8.5.1 Package dependencies

```

755 \RequirePackage{pgfopts}

```

#### 8.5.2 Options

`block` Optionally adds a light grey background to block environments like `theorem` and `example`.

```

756 \pgfkeys{
757   /ru/color/block/.cd,
758   .is choice,
759   transparent/.code=\ru@block@transparent,
760   fill/.code=\ru@block@fill,
761 }

```

**colors** Provides the option to have a dark background and light foreground instead of the reverse.

```

762 \pgfkeys{
763   /ru/color/background/.cd,
764   .is choice,
765   dark/.code=\ru@colors@dark,
766   light/.code=\ru@colors@light,
767 }

```

**\ru@color@setdefaults** Sets default values for color theme options.

```

768 \newcommand{\ru@color@setdefaults}{
769   \pgfkeys{/ru/color/.cd,
770     background=light,
771     block=transparent,
772   }
773 }

```

### 8.5.3 Base colors

```

774 \definecolor{ruDarkText}{HTML}{222222}
775 \definecolor{ruDarkTeal}{HTML}{B82B22}
776 \definecolor{ruLightTeal}{HTML}{DDDDDD}
777 \definecolor{ruLightBrown}{HTML}{F45709}
778 \definecolor{ruLightGreen}{HTML}{14B03D}

```

### 8.5.4 Base styles

All colors in **ru** are derived from the definitions of `normal text`, `alerted text`, and `example text`.

```

779 \newcommand{\ru@colors@dark}{
780   \setbeamercolor{normal text}{%

```

```

781     fg=black!2,
782     bg=ruLightTeal
783 }
784 \usebeamercolor[fg]{normal text}
785 }
786 \newcommand{\ru@colors@light}{
787   \setbeamercolor{normal text}{%
788     fg=ruDarkText,
789     bg=black!2
790   }
791 }
792 \setbeamercolor{title text}{%
793   fg=ruDarkTeal
794 }
795 \setbeamercolor{alerted text}{%
796   fg=ruLightBrown
797 }
798 \setbeamercolor{example text}{%
799   fg=ruLightGreen
800 }

```

### 8.5.5 Derived colors

The titles and structural elements (e.g. `itemize` bullets) are set in the same color as `normal text`. This would ideally be done by setting `normal text` as a parent style, which we do to set `titlelike`, but this doesn't work for `structure` as its foreground is set explicitly in `beamercolorthemedefault.sty`.

```

801 % \setbeamercolor{titlelike}{use=normal text, parent=normal text}
802 \setbeamercolor{titlelike}{use=title text, parent=title text}
803 \setbeamercolor{author}{use=normal text, parent=normal text}
804 \setbeamercolor{date}{use=normal text, parent=normal text}
805 \setbeamercolor{institute}{use=normal text, parent=normal text}
806 \setbeamercolor{structure}{use=normal text, fg=normal text.fg}

```

The “primary” palette should be used for the most important navigational elements, and possibly of other elements. `ru` uses it for frame titles and slides.

```

807 \setbeamercolor{palette primary}{%
808   use=normal text,

```

```

809 fg=normal text.bg,
810 bg=ruDarkTeal
811 }
812 \setbeamercolor{frametitle}{%
813 fg=ruLightTeal,
814 bg=ruDarkTeal
815 }

```

The `ru` inner or outer themes optionally display progress bars in various locations. Their color is set by `progress bar` but the two different kinds can be customized separately. The horizontal rule on the title page is also set based on the progress bar color and can be customized with `title separator`.

```

816 \setbeamercolor{progress bar}{%
817 fg=ruLightBrown,
818 bg=ruLightBrown!50!black!30
819 }
820 \setbeamercolor{title separator}{
821 use=progress bar,
822 parent=progress bar
823 }
824 \setbeamercolor{progress bar in head/foot}{%
825 use=progress bar,
826 parent=progress bar
827 }
828 \setbeamercolor{progress bar in section page}{
829 use=progress bar,
830 parent=progress bar
831 }

```

Block environments such as `theorem` and `example` have no background color by default. The option `block=fill` sets a background color based on the background and foreground of `normal text`. The option `block=transparent` reverts the block environments to an empty background, which can be useful if changing colors mid-presentation.

```

832 \newcommand{\ru@block@transparent}{
833 \setbeamercolor{block title}{%
834 use=normal text,
835 fg=normal text.fg,
836 bg=

```

```

837 }
838 \setbeamercolor{block body}{
839     bg=
840 }
841 }
842 \newcommand{\ru@block@fill}{
843     \setbeamercolor{block title}{%
844         use=normal text,
845         fg=normal text.fg,
846         bg=ruDarkTeal!50!normal text.bg!50
847     }
848     \setbeamercolor{block body}{
849         use={block title, normal text},
850         bg=block title.bg!20!normal text.bg
851     }
852 }
853 \setbeamercolor{block title alerted}{%
854     use={block title, alerted text},
855     bg=block title.bg,
856     fg=ruDarkTeal
857 }
858 \setbeamercolor{block title example}{%
859     use={block title, example text},
860     bg=block title.bg,
861     fg=example text.fg
862 }
863 \setbeamercolor{block body alerted}{use=block body, parent=block body}
864 \setbeamercolor{block body example}{use=block body, parent=block body}

```

#### Footnotes

## 8.6 Tol pgfplots theme

Paul Tol’s 12-color palette<sup>1</sup> is as follows:

```
870 \definecolor{TolDarkPurple}{HTML}{332288}  
871 \definecolor{TolDarkBlue}{HTML}{6699CC}  
872 \definecolor{TolLightBlue}{HTML}{88CCFF}  
873 \definecolor{TolLightGreen}{HTML}{44AA99}  
874 \definecolor{TolDarkGreen}{HTML}{117733}  
875 \definecolor{TolDarkBrown}{HTML}{999933}  
876 \definecolor{TolLightBrown}{HTML}{DDCC77}  
877 \definecolor{TolDarkRed}{HTML}{661100}  
878 \definecolor{TolLightRed}{HTML}{CC6677}  
879 \definecolor{TolLightPink}{HTML}{AA4466}  
880 \definecolor{TolDarkPink}{HTML}{882255}  
881 \definecolor{TolLightPurple}{HTML}{AA4499}
```

To use these colors, we describe “cycle lists” from which PGF chooses styles for the different series in a chart.

`mbarplot cycle` Colors and styles intended for bar charts with up to 12 series.

```
882 \pgfplotscreateplotcyclelist{mbarplot cycle}{%  
883 {draw=TolDarkBlue, fill=TolDarkBlue!70},  
884 {draw=TolLightBrown, fill=TolLightBrown!70},  
885 {draw=TolLightGreen, fill=TolLightGreen!70},  
886 {draw=TolDarkPink, fill=TolDarkPink!70},  
887 {draw=TolDarkPurple, fill=TolDarkPurple!70},  
888 {draw=TolDarkRed, fill=TolDarkRed!70},  
889 {draw=TolDarkBrown, fill=TolDarkBrown!70},  
890 {draw=TolLightRed, fill=TolLightRed!70},  
891 {draw=TolLightPink, fill=TolLightPink!70},  
892 {draw=TolLightPurple, fill=TolLightPurple!70},  
893 {draw=TolLightBlue, fill=TolLightBlue!70},  
894 {draw=TolDarkGreen, fill=TolDarkGreen!70},  
895 }
```

`mlineplot cycle` Colors and styles intended for line charts with up to 4 series.

---

<sup>1</sup>Tol actually describes several palettes; these colours are taken from the bottom row of Figure 3 in his technical note.

```

896 \pgfplotscreateplotcyclelist{mlineplot cycle}{%
897   {TolDarkBlue, mark=*, mark size=1.5pt},
898   {TolLightBrown, mark=square*, mark size=1.3pt},
899   {TolLightGreen, mark=triangle*, mark size=1.5pt},
900   {TolDarkBrown, mark=diamond*, mark size=1.5pt},
901 }

```

However, the above cycle lists are not applied automatically. We still need to define styles — `mlineplot` and `mbarplot` — that the user can apply to the axis of a `pgfplots` chart to use the colors. We'll also take the opportunity to adjust the display of chart axes when these styles are used.

```

902 \pgfplotsset{
903   compat=1.9,

```

`mlineplot` A style to apply to the axis of a PGF line plot.

```

904   mlineplot/.style={
905     mbaseplot,
906     xmajorgrids=true,
907     ymajorgrids=true,
908     major grid style={dotted},
909     axis x line=bottom,
910     axis y line=left,
911     legend style={
912       cells={anchor=west},
913       draw=none
914     },
915     cycle list name=mlineplot cycle,
916   },

```

`mbarplot` A style to apply to the axis of a PGF bar chart. `mbarplot` uses vertical bars by default, while `horizontal mbarplot` has horizontal bars as the name implies. Their shared properties are factored out into the internal style `mbarplot base`.

```

917   mbarplot base/.style={
918     mbaseplot,
919     bar width=6pt,
920     axis y line*=none,
921   },
922   mbarplot/.style={

```

```

923     mbarplot base,
924     ybar,
925     xmajorgrids=false,
926     ymajorgrids=true,
927     area legend,
928     legend image code/.code={%
929         \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
930     },
931     cycle list name=mbarplot cycle,
932 },
933 horizontal mbarplot/.style={
934     mbarplot base,
935     xmajorgrids=true,
936     ymajorgrids=false,
937     xbar stacked,
938     area legend,
939     legend image code/.code={%
940         \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
941     },
942     cycle list name=mbarplot cycle,
943 },

```

**mbaseplot** Adjusts the appearance of the axes in a PGF chart.

```

944 mbaseplot/.style={
945     legend style={
946         draw=none,

948         cells={anchor=west},
949     },
950     x tick label style={
951         font=\footnotesize
952     },
953     y tick label style={
954         font=\footnotesize
955     },
956     legend style={
957         font=\footnotesize
958     },
959     major grid style={

```

```

960     dotted,
961   },
962   axis x line*=bottom,
963 },
964 disable thousands separator/.style={
965   /pgf/number format/.cd,
966     1000 sep={}
967 },
968 }

```
